FULL STACK DEVELOPER

I am a highly skilled web developer with over **3 years of experience** in **HTML, CSS, JavaScript, and PHP**. I have knowledge of popular frameworks such as **React, Angular, and Vue.js** and experience with REST APIs and MVC frameworks.

TECHNICAL SKILLS

| | |
|-------------------|---|
| Languages | : Python, SQL, JavaScript, MATLAB, C++ |
| Frameworks | : TensorFlow, Keras, Scikit-learn, Django, Streamlit |
| Libraries | : matplotlib, pandas, NumPy, NLTK, Seaborn, BeautifulSoup, Selenium |
| Databases | : MySQL, MongoDB |
| Dev Tools | : VS Code, Git, GitHub, Jupyter Notebook, Anaconda, AWS, Kaggle |

EDUCATION

| | |
|---|--|
| Indian Institute of Technology Delhi <i>Master of Science in Physics, (8.6 GPA)</i> | New Delhi, India <i>July 2021 – May 2023 (Expected)</i> |
| Banaras Hindu University <i>Bachelor of Science in Physics, (8.4 GPA)</i> | Varanasi, Uttar Pradesh India <i>July 2018 – May 2021</i> |

PROJECTS

| | | |
|--|--|-----------------------------|
| House Prices Prediction | <i>Python, pandas, scikit-learn, kaggle, Matplotlib, Seaborn</i> | Source Code |
| <ul style="list-style-type: none">Analyzed over 80 features to predict house prices using machine learning.Performed data visualization and feature engineering using Matplotlib and Seaborn, respectively.Trained multiple models using scikit-learn and selected the best one by applying grid search and cross-validation. Achieved a top 12% ranking on the Kaggle leaderboard. | | |
| IBM Data Analytics Capstone Project | <i>Python, pandas, Matplotlib, Web Scraping, Web API</i> | Source Code |
| <ul style="list-style-type: none">Gathered and analyzed data from various sources, including API and web scraping. Conducted exploratory data analysis and wrangling to prepare the data for further analysis.Built a dynamic dashboard to extract valuable insights from the collected data, and effectively communicated the findings to others through an engaging presentation. | | |
| Credit Risk Assesment | <i>Python, pandas, scikit-learn, kaggle</i> | Source Code |
| <ul style="list-style-type: none">Developed a credit textbfrisk assessment model by analyzing various customer features, performing data cleaning, feature engineering, and exploratory data analysis.Established a basic model for initial experimentation, and trained advanced models such as LR, SVM, XGBoost, Catboost. Top performing model, achieved a test AUC-ROC score of 0.97 and precision of 0.96. | | |
| pystock | <i>Python, portfolio theory, pytest</i> | Source Code |
| <ul style="list-style-type: none">Developed pystock, a comprehensive Python library for portfolio optimization and management. Utilizing object-oriented programming, created a user-friendly API capable of optimizing portfolios with any number of securities.The library includes various models, such as the Capital Asset Pricing Model, Single Index Model, Fama-French three- and five-factor models, and has a suite of over 100 unit tests written with pytest and fixtures, spanning more than 1500 lines of code. | | |
| optionalyzer | <i>Python, options, futures, plotly, BS model</i> | Source Code |
| <ul style="list-style-type: none">Developed optionalyzer, a powerful Python library for Options Strategy Builder that makes it easy to create custom options trading strategies. | | |

- Implemented the **Black-Scholes Model** to accurately calculate **Option prices** and utilized **optimization** techniques to find the **implied volatility** of the Option, enabling users to make better trading decisions.
- Leveraged **Plotly** to create an **interactive Options payoff diagram** for any date, allowing users to explore potential outcomes for different combinations of Options.
- Developed a **user-friendly API** that enables users to easily add **short or long, Put and Call Options** to the payoff diagram for strategy building.

frontier

Python, portfolio theory, pytest

[Source Code](#)

- Developed **frontier**, a Python module for **plotting the efficient frontier** of a portfolio with an arbitrary number of securities.
- Utilizes **Monte Carlo simulations** to create an **interactive efficient frontier**, enabling users to easily explore different portfolios and their expected returns and risks.
- Built on top of **pystock**, the module supports all the models that are supported by pystock, including **CAPM, SIM, FF3FM** and **FF5FM**, making it a comprehensive tool for portfolio optimization and management.

Tableau Dashboards

Tableau, Web Scraping, Web API, BeautifulSoup

[Music Books](#)

- Created an interactive **Tableau viz** showcasing my **Spotify streaming history** over several years, using **data blending** and **calculated fields** to present key insights.
- Utilized **web scraping** techniques to extract my book reading history from **Goodreads** and created an interactive **Tableau** dashboard to analyze and visualize the data.

CERTIFICATIONS

- Deep Learning Specialization (DeepLearning.AI) [Certificate](#)
- Machine Learning Specialization (DeepLearning.AI) [Certificate](#)
- TensorFlow Developer Certificate in 2022: Zero to Mastery (Udemy) [Certificate](#)
- Financial Markets (Yale University) [Certificate](#)
- Simulation Models for Decision Making (University of Minnesota) [Certificate](#)
- IBM Data Analyst Capstone Project (IBM) [Certificate](#)
